STONE CHARACTERISTICS OUTSIDE PHOTO RANGE MAY VARY

There are likely to be variations in consistency of colours and textures, appearance and quality in the finished product of the hardened concrete, as the raw ingredients are natural and subject to variations beyond our control. Whilst every effort has been made to match the colours in the preparation of this document, reproductive processes will alter the actual appearance in the concrete products to varying degrees.

The concrete samples shown are indicative only of the finished concrete product, and no guarantee of the colours or textures of the product is given or implied by this document.

PRODUCT NAME:

## ALPINE ASH

*Crushed 14mm Milky Grey Quartzite set in a grey cement and sand base.*

### Things you should know

The stone used in this product is the purest white quartz we can source.

It is also a rare resource and availability is often restricted when demand exceeds the quarry's ability to supply.

There are significant fragments of darker material that occur naturally when using this stone.

The detail image is not large enough to properly demonstrate this aspect of the product.

A darker base colour can be achieved with the inclusion of black pigment. Have a look at Africanus Black.

SPECIFICATION:

*Vic Mix Alpine Ash 25MPa  
Exposed Aggregate Concrete*

ORDER CODE:

**X\_ALPAS**
